Applications for thread repair with HELICOIL® plus

Repairing of damaged spark plug threads

In the automotive industry the HELICOIL® plus thread technology is widely used to provide high strength threads.

Thanks to efficient repair of damaged threads, valuable components do not have to be replaced.

Thread repair for aluminium engines

With HELICOIL® plus thread inserts, cost-intensive replacements of threads in aluminium engines, such as employed in motor sports, are no longer necessary. Preventive installation of HELICOIL® plus ensures minimum effort for thread repair during engine life.

Thread repair in different industry sectors

Common applications relying on threads are employed in the machine and plant construction, power plant engineering and shipbuilding. Scrap reclamation: High volume production parts with damaged threads can be reworked.

Thread repair involves multiple standards. HELICOIL® plus thread inserts comply with certifications for numerous industries, e.g. approved by:

- Technical Inspection Authority (TÜV)
- Germanischer Lloyd
- DET Norske Veritas

In the field of nuclear energy an individual inspection is being conducted.

HELICOIL® plus *Thread Technology*

- Thread inserts ensure heavy-duty connection capability, especially in low-strength materials like aluminium and magnesium. For over fifty years, they have been used in practice and proven reliable.
- HELICOIL® thread repair is used in metals as well as in many plastic and composite materials.
- Thread inserts are made from well-proven and tested quality stainless steel (A2) and are formed from rhomboidally profiled wire into a resilient spiral.
- HELICOIL® plus thread inserts comply with multiple requirements and standards for general industry and aerospace industry such as DIN 8140, DIN 65536, EN 2944, LN 9039 and LN 9490. On request, we give you further standards the threads comply with.
- Scrap reclamation: High volume production parts with damaged threads can be reworked.

HELICOIL® plus – *the solution for threads damaged by wear of overtorque*

Your advantages

- Permanent high strength and wear resistant
- Corrosion and temperature resistant
- Easy and quick mounting
- HELICOIL® plus – the original

Damaged thread

Repaired thread

How to install HELICOIL® plus

- HELICOIL® plus thread inserts are screwed in just like a common screw. The tool sleeve with leader cartridge, that was required in the past, is no longer needed. All that is needed for screwing-in is an installation mandrel the size of a screw tap.
- The mandrel can be compared to a screw tap energised by a die wrench or other common tools from nut bodies with ratchet wrench. For particularly low-height thread repairs, the mandrel can be extended. The HELICOIL® plus thread insert is screwed in until the nose meets the tang. Thus, the thread also works in vertical installations. It guarantees safe repairing of threads.
- To determine the right depth of insertion, the last spiral wire has to be situated under the first flank of the thread.
- Since HELICOIL® plus threads are installed without a leader cartridge, the depth of insertion can be visually checked. Thus, it is not necessary to use a depth control stop as it is for tools using leader cartridges. For easier identification in the fitted position, HELICOIL® plus threads are green-coloured.
- After installation the tang is broken off at the notch (pre-set break-off point).
- The new HELICOIL® plus technology allows repairing threads, that up until now could only be repaired using special tools.

Installation of HELICOIL® plus thread inserts

Drilling the core hole

Please take note of the recommended diameters for drilling the core hole $D_{1\text{ HC}}$ from the table on page 36/37. Please note, that information about the twist drill B are only values for orientation. For counter-boring (burring) the core hole outer diameter of the couterbore: $D_{\text{HC}} + 0.1\text{ mm}$

HELICOIL® plus holding thread

Please only use the special HELICOIL® plus screw tap. For checking the holding thread, we can send you plug limit gauge.

HELICOIL® plus installation without leader cartridge

Arrange manual tap:

■ hole in centre ■ vertical

≥ BSF 1/4"-26**

Right hub

HELICOIL® plus thread insert is to be installed at least 1/4 thread below the work piece top surface and seated in a fully cut thread.

Break tang

Please remove the tang from the thread using the tang break-off tool. The tang of threads $\geq M 14$ should be broken off with long-nosed pliers by axial raising and lowering.

**Information about
the range of
HELICOIL® plus
lengths on page 35.**

Product range HELICOIL® plus repair kits and repair range kits

Repair kits with HELICOIL® plus metric thread inserts

- M 2 – M 16 x 1.5
(available in three lengths per size, each 20 or 10 HELICOIL® plus thread inserts)
- M 18 – M 36 x 1.5
(with 10 HELICOIL® plus thread inserts in one length)

- Oil drain threads M 12 x 1.5, M 14 x 1.5 and M 16 x 1.5
(available in three lengths per size, each 10 HELICOIL® plus thread inserts)
- Spark plug threads M 10 x 1, M 12 x 1.25 and M 14 x 1.25
(available in three lengths per size, each 10 HELICOIL® plus thread inserts)
- Lambda probe threads M 18 x 1.5
(with 5 HELICOIL® plus thread inserts in one length)

Repair range kits of HELICOIL® plus metric thread inserts

Six different ranges:

- M 2.5 – M 6
- M 4 – M 10
- M 5 – M 12
- M 6 – M 14 x 1.25
- Range of spark plug threads M 10 x 1 – M 14 x 1.25
- Range of oil drain threads M 12 x 1.5, M 14 x 1.5, M 16 x 1.5

Repair kits of HELICOIL® plus imperial thread inserts

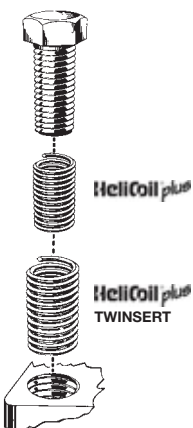

- UNC 2-56 to UNC 1 1/2"-6
- UNF 4-48 to UNF 1"-12
- BSW 3/16"-24 to BSW 1 1/2"-6
- BSF 1/4"-26 to BSF 1"-10
- G 1/8"-28 to G 1"-11

Repair range kits of HELICOIL® plus respectively HELICOIL® imperial thread inserts

Five different ranges:

- UNC (UNC 5-40 to UNC 12-24 and UNC 1/4"-20 to UNC 1/2"-13)
- UNF (UNF 4-48 to UNF 1/4"-28 and UNF 1/4"-28 to UNF 1/2"-20)
- BSW (BSW 1/4"-20 to BSW 1/2"-12)

Repair kits HELICOIL® plus TWINSERT from M 2.5 to M 16

The HELICOIL® plus TWINSERT uses two HELICOIL® plus inserts, one installed inside the other. Faults requiring the repair kit HELICOIL® TWINSERT are thread bores which require correction, stripped and oversized or off-centered threads which cannot be corrected using a larger bolt diameter.

HELICOIL® plus repair kits with metric thread inserts

M 2 – M 16 x 1.5
ISO metric threads, stainless steel A2

Contents:
HELICOIL® plus thread inserts in three sizes
Twist drill (up to M 12)
HELICOIL® hand tap HSS
HELICOIL® plus installation mandrel
Tang break-off tool (up to M 12)

d = Nominal thread diameter (mm), P = Thread pitch (mm), L = Length (mm)

Thread repair for damaged oil drain threads

After tapping the HELICOIL® plus thread, you have to use the slide gauge to find out how many turns the HELICOIL® plus thread insert needs.

The installation description is used to select the HELICOIL® plus with the appropriate number of turns "W". If necessary, the HELICOIL® plus is trimmed using the edge cutter.

Once the thread has been repaired and the tang has been broken off, you will be left with a perfect and heavy duty thread. There are no edges, which means that the oil can drain away freely.

An adequate sealing ring support is available for standard sealing plugs with collar. The original sealing plug can be used.

HELICOIL® plus repair kits with metric thread inserts for special applications

**M 12 x 1.5 – M 16 x 1.5 (oil drain threads)
ISO metric threads, stainless steel A2**

Contents:

HELICOIL® plus threaded inserts in three lengths

Combined drilling and tapping tool

HELICOIL® hand tap (for obstructions)

HELICOIL® plus installation mandrel, tang break-off tool, slide gauge

Hand taps HELICOIL® plus and HELICOIL®

Type 0140.0

HELICOIL® cutting taps

- for coarse threads up to $P = 2$ mm
- for fine threads up to $P = 3$ mm
- For cutting operations of materials with strengths up to 700 N/mm^2
- For through holes
- For blind holes only if there is sufficient tapping space. The core holes to be cut at least 1 d deeper than the fully cut thread length.

① Standard HELICOIL® hand taps produce a holding thread of tolerance class 5H (6H mod). The HELICOIL® installation results in an ISO thread of tolerance class 6H. For HELICOIL® holding threads of tolerance class 4H (5H mod) the ninth digit of the product code changes from 1 to 2. The HELICOIL® installation results in an ISO thread of tolerance class 5H.

② The prices of HELICOIL® hand taps depend on the price of the relevant alloy on the supply date.

TiN coated taps can be supplied on request.

The cutting taps can also be supplied as machine taps.

Taps for special requirements, such as hard or tough materials, can be supplied on request.

For more detailed information, please ask for our catalogue 0100.

Hand taps for HELICOIL® plus and HELICOIL®

Type 0140.1-2

HELICOIL® manual taps, two-parts set, graded pitch

- Pre-tap 4-action cut 0140.1...
- Final tap 2-action cut 0140.2...

Applications for tap sets:

- Thread diameters \geq M 18
- In case of materials that are hardly machinable also for dimensions $<$ M 18
- Pitches up to $P = 3.5$ mm
- Cutting operation of materials up to 700 N/mm²
- For through or blind holes

Tap sets reduce the required input torque.

① Standard HELICOIL® hand taps produce a holding thread of tolerance class 5H (6H mod). The HELICOIL® installation results in an ISO thread of tolerance class 6H. For HELICOIL® holding threads of tolerance class 4H (5H mod) the ninth digit of the product code changes from 1 to 2. The HELICOIL® installation results in an ISO thread of tolerance class 5H.

② The prices of HELICOIL® hand taps depend on the price of the relevant alloy on the supply date.

TiN coated taps can be supplied on request.

The cutting taps can also be supplied as machine taps.

Taps for special requirements, such as hard or tough materials, can be supplied on request.

Combined drilling and tapping tools for HELICOIL® plus and HELICOIL®

For tapping HELICOIL® holding threads in damaged metric standard and fine threads.

Pre-drilling of the HELICOIL® holding thread is not necessary. For blind holes the tool is only usable under certain conditions due to the guiding unit d 3 x L 5.

① For tolerance class 4H the ninth digit in the ordering ref. no. changes from 5 to 4.
Details refer to catalogue 0100.

Non-cutting forming of inner threads for through hole and blind holes

With lubrication grooves

Perfect lubrication even at larger depths

Speeds corresponding to thread tap

Lubrication:

Lubricant containing oils or emulsions containing grease

Material range:

Mouldable materials such as aluminium, copper and zinc alloys, steel up to 700 N/mm², stainless steels.

Machine taps for HELICOIL® plus and HELICOIL®

Type 0141.1

HELICOIL® machine taps, straight grooved, tapping angle 10°, with curling cut, 4 action cut for through holes, for blind holes with deep-drilled thread hole.

- For pitches up to P = 3.5 mm
- For materials below and above 700 N/mm² strength.
- For through-hole tapping.

① Standard HELICOIL® hand taps produce a holding thread of tolerance class 5H (6H mod).
 The HELICOIL® installation results in an ISO thread of tolerance class 6H. For HELICOIL® holding threads of tolerance class 4H (5H mod) the ninth digit of the product code changes from 1 to 2.
 The HELICOIL® installation results in an ISO thread of tolerance class 5H.

② The prices of HELICOIL® hand taps depend on the price of the relevant alloy on the supply date.

TiN coated taps can be supplied on request.

The short machine tap can also be supplied as a machine tap.

Taps for special requirements, such as hard or tough materials, can be supplied on request.

For more detailed information please ask for our catalogue 0100.

HELICOIL®plus and HELICOIL® design guidelines for thread technology

Determination of the nominal length

Guideline values for determining the length of the HELICOIL®plus thread insert relative to the parent material and the property class, valid for temperatures of 20°C

Strength of the parent material Tensile strength R_m (N/mm ²)	Screw property class								
	3.6 4.6	4.8 5.6	5.8 6.6	6.8 6.9	8.8	9.8	10.9	12.9	14.9
up to 100	1.5 d	1.5 d	2 d	2.5 d	3 d	3 d	-	-	-
> 100 – 150	1.5 d	1.5 d	2 d	2 d	2.5 d	2.5 d	2.5 d	2.5 d	3 d
> 150 – 200	1 d	1.5 d	1.5 d	1.5 d	2 d	2 d	2 d	2.5 d	2.5 d
> 200 – 250	1 d	1 d	1.5 d	1.5 d	1.5 d	1.5 d	2 d	2.5 d	2.5 d
> 250 – 300	1 d	1 d	1 d	1 d	1.5 d	1.5 d	1.5 d	2 d	2 d
> 300 – 350	1 d	1 d	1 d	1 d	1 d	1.5 d	1.5 d	1.5 d	2 d
> 350 – 400	1 d	1 d	1 d	1 d	1 d	1 d	1.5 d	1.5 d	1.5 d
> 400	1 d	1 d	1 d	1 d	1 d	1 d	1.5 d	1.5 d	1.5 d

The table for determination of the nominal length is valid for aluminium as well as materials with a ratio of $\frac{\text{shearing stress}}{\text{tensile strength } (R_m)} = 0.6$ up to 0.7

Alloy of iron casting have a ratio of $\frac{\text{shearing stress}}{\text{tensile strength } (R_m)} = 0.8$ up to 1.4 (Source VDI 2230)

The guideline values must be assessed so that the screw is always the weakest part of the connection.

Falling short of recommended nominal lengths is acceptable if proven by testing.

Intermediate lengths are also available.

By interpreting the screw connection that is stressed by temperature please take the changes of temperature dependant materials into consideration.

Minimum wall thickness

Assessment of the minimum wall thickness is mainly pre-determined by the individual operation data. The operation data in turn determine the strength of the material and the length of the thread. The quoted guideline value formula applies to aluminium, cast and wrought alloys and a HELICOIL®plus screw-in thread length of 1.5 d.

- d = Nominal diameter of the holding thread
- D_{HC} = Outside \varnothing
- a = Remaining wall thickness

Graphic representation for the example M 10 x 15:

HELICOIL®plus thread insert, inserted

HELICOIL®plus thread insert with screw, inserted

HELICOIL® plus and HELICOIL® metric installation data

The HELICOIL® holding thread without countersink provides excellent screw entry into the thread insert. In circumstances where countersinking cannot be dispensed, e.g. for sealing surfaces that cannot be further machined the following special rules apply:

Largest countersink $\varnothing \leq$
Holding thread outside diameter $\varnothing D_{HC}$ min
respectively $D_{HC} + 0.1$ mm.

- d = Nominal thread diameter
- P = Thread pitch
- D_{HC} = Holding thread outside diameter
- D_{1HC} = Core hole thread diameter
- t_1 = Minimum depth of core hole in acc. with DIN 76 Part 1 (normal case)
- t_2 = Nominal length of the thread insert and minimum length to the holding thread
- t_3 = Maximum screw-in depth with tang not broken off
- t_5 = Distance of thread insert from the separating surface = 0.25 P, if t_2 complies with the minimum value given above.

Note:
 Thread insert is to be at least $\frac{1}{4}$ thread below the workpiece top surface and seated in fully cut threads (see figure below):

We can supply HELICOIL® internal thread limit gauges for testing the tapped internal thread on request.

Nominal thread \varnothing d	Pitch P	Rec. twist drill* \varnothing	d_1		Core hole diameter D_{1HC}		Core hole depth t_1 min.			Fully cut thread useable thread depth nominal length of insert L min.			Length of installed insert useable thread length l_2			Screw-in length for screw if driven tang is not removed t_3 max.			Outside $\varnothing D_{HC}$ min.
			min.	max.	min.	max.	1 d	1.5 d	2 d	1 d	1.5 d	2 d	1 d	1.5 d	2 d	1 d	1.5 d	2 d

* The recommended twist drill diameters are for guidance only. It is known that the accuracy of the core \varnothing after tapping can vary widely and depends on a number of well-known factors that must be taken into account. It is important that the thread diameter after tapping complies with the recommended limiting value D_1 HC.

HELICOIL®plus TWINSERT thread inserts for metals

Trouble-free thread correction and repair

Use and description

When you need to repair internally threaded holes that have widespread cracks, are off-centre or over-sized, and large-diameter screws cannot be used due to the physical characteristics of the workpiece, HELICOIL®plus TWINSERT thread inserts are a repair solution with “a HELICOIL®plus inside a HELICOIL®plus”.

TWINSERT consists of two HELICOIL®plus thread inserts. The outer insert is always a HELICOIL®plus free running type, whilst the inner insert can be a HELICOIL®plus free running or a HELICOIL®plus SCREWLOCK type with 1.5 or 2.0 d of lengths.

Note: Since the inner HELICOIL®plus is a standard length, the HELICOIL®plus TWINSERT is one thread longer, which must be taken into account for T4, the thread length of the holding thread. If this T4 thread length cannot be achieved on the workpiece, both HELICOIL®plus thread inserts must be shortened accordingly. The standard material is X5CrNi1810 (1.4301). Other materials and surface finishes are available on request.

Available sizes

HELICOIL®plus TWINSERT repair kits are available for ISO metric coarse threads ranging from M2 to M 16, for ISO metric fine threads ranging from M8 x 1 to M16 x 1.5, all with nominal lengths of 1.5 d and 2.0 d (see tables on p. 39). Sizes larger than M 16 and imperial sizes on request.

Kit contents

Every HELICOIL®plus TWINSERT repair kit contains the number of HELICOIL®plus pairs shown in the tables on p. 39, a TWINSERT tap for installing the outer insert, separate insertion spindles (insertion tools) for the inner and outer inserts and a tang break-off tool. For sizes \geq M 12, tangs are designed to be removed using long-nosed pliers. For sizes \leq M 8, the HELICOIL®plus TWINSERT repair kit contains a suitable twist drill.

Installation procedure

- Drill core hole. For core hole diameter and other dimensions please see tables on p. 39.
- Cut threads using the TWINSERT tap (for outer HELICOIL®plus thread insert)¹.
- Install outer HELICOIL®plus thread insert using the TWINSERT insertion tool approx. 1/4 – 1/2 turn below the top surface of the workpiece.
- Remove the tang from the outer HELICOIL®plus using the tang break-off tool.
- Install the inner HELICOIL®plus using the installation tool. Its end has to be flush with the outer HELICOIL®plus TWINSERT (see drawing).
- Break tang off the inner HELICOIL®plus thread insert.

¹The gauge size of the created threads depends on the use of the HELICOIL® TWINSERT hand tap.

- d = Thread nominal diameter (inner HELICOIL® plus)
- L₂ = Length of inner screw thread insert (in installed position)
- W = Number of threads prior to installation (outer HELICOIL® plus TWINSERT)
- D_{TW} = Outside diameter of holding thread
- D_{TW} = Thread core diameter of holding thread
- t₁ = Minimum depth of core hole see DIN 76 Part 1
- t₂ = Distance of thread insert from separating surface = 0.25 P, if T₂ is equal to the minimum value given above
- L₂ = Length of the outer thread insert (in installed position)
- T₂ = Minimum length of holding thread for blind holes and through holes = T₂ = nominal length of the outer thread insert (recommended value)
